

Curly Extension Aftercare Form

Please read, follow, and sign before leaving the salon.

Client Name:

Date:

Stylist:

Your individual extensions need gentle daily care to prevent slipping, matting, dryness, and damage. Curly hair also needs moisture, curl-safe detangling, and low-frizz styling to keep curls healthy and defined.

Please Follow These Instructions

What To Do	Client Instructions
Showering	Press shampoo into the hair and lightly scrub the scalp. Rinse very well so shampoo does not build up around the extensions. For curls, shampoo only as needed with a sulfate-free, moisturizing shampoo.
Conditioning	Condition mid-lengths and ends generously. Keep heavy conditioner, oils, masks, and slippery products away from the bond or attachment area unless your stylist instructs otherwise.
Curly Detangling	Never brush curly hair dry. Detangle with fingers or a wide-tooth comb only when hair is slippery with conditioner or leave-in. Hold near the attachment area so you do not pull on the bond, bead, or base.
Curl Styling	Apply leave-in conditioner, serum, curl cream, mousse, or gel as recommended by your stylist. Scrunch curls upward and avoid touching them too much to reduce frizz.
Sleeping	Sleep with completely dry hair in a loose braid, loose ponytail, or soft ballerina bun once comfortable. Use a bonnet or silk/satin pillowcase for extra curl and extension protection.
Serum & Moisture	Use serum on extensions when hair feels dry or frizzy. Leave-in conditioner and serum help keep curly hair hydrated, soft, smooth, and defined.
Washing Schedule	Wash as often as works best for you. Curly hair is often best with less shampoo and more moisture, so ask your stylist what schedule fits your hair.
Professional Products	Use extension-safe professional products. Serum is the most important product for keeping individual extensions soft and hydrated. Ask your stylist which Davines products are best for you.

Extra Aftercare Tips

First week adjustment: Your scalp will be adjusting during the first week. Irritation, itchiness, or tenderness can be normal. We recommend taking Benadryl at night, following product directions. If symptoms are still present after one week, contact your stylist.

Morning curl refresh: Lightly mist curls with water or curl refresher, then use your fingers to reshape curls.

Purple shampoo or hard water: Dilute purple shampoo with water before applying. If curls feel dry, dull, coated, or brassy, ask your stylist about conditioner-only rinsing, a shower filter, or a mineral treatment.

Important Reminders

Please contact the salon if you notice pain, irritation, slipping, matting, sticky bonds, excessive shedding, unusual dryness, or extensions that are difficult to separate. Do not pick at, cut, pull, or remove extensions at home.

Client Agreement

I understand that proper aftercare is required to maintain my individual extensions and curly hair. I agree to follow these instructions and contact the salon with any concerns.
